SUMMARY

Devoted software engineering specialist with a solid background in full-stack development and UI/UX design. I've finished my UI/UX Designer internship at Synchrones (Pvt) Ltd. and the Pearson BTEC HND in Computing (Software Engineering) at ESOF Metro Campus (London Metropolitan University collaboration). I have demonstrated the ability to convert intricate drawings into useful products while upholding the highest professional standards, and I am skilled in both Figma and React. In order to further develop my technical proficiency and architectural problem-solving skills, I am currently pursuing a BEng (Hons) in Software Engineering.

WORK EXPERIENCE

Zentrix Software Solutions | Founder & Lead Software Engineer | Part-Time / Contract | Nov 2025 – Present

- Founded and managed a boutique software solutions agency delivering custom full-stack web and cloud applications for regional clients.
- Led end to end SDLC across client projects from UI/UX wireframing in Figma to frontend / backend engineering and automated CI / CD deployment pipelines.
- Designed and built responsive, scalable platforms including custom client platforms and SaaS web products using React, Node.js, Java, and MongoDB.

Developed Zentrix Software Solutions Official Web Platform

- Using contemporary web technology, a futuristic, high performing official website for Zentrix Software Solutions is now being developed. Spline and glassmorphic design elements are used to combine a 3D-animated hero segment into the project's highly interactive user interface. With continuous improvements aimed at improving user engagement and performance, this platform is being developed to present an extensive service portfolio and industry-standard software solutions.

Developed Voyara Adventures Tourism (Figma, React, Css, Java, Mongo DB)

- Currently engineering a full-stack tourism web application using React, Java, and MongoDB to streamline Sri Lankan tour bookings. The project features an ongoing implementation of a multi-step booking architecture, real-time pricing, dynamic vehicle selection, and automated route customization. Leveraging Git, GitHub, and an automated CI/CD pipeline, code changes pushed via VS Code are seamlessly deployed to update the live site. Designed with a user centric UI/UX, it efficiently manages group compositions, flight tracking, and custom itineraries.

Developed Deno Cabs Tours (Figma, React, Css, Java, Mongo DB)

- Currently building a full-stack cab booking and tour platform using Figma, React, Java, and MongoDB. Designed end to end UI/UX prototypes in Figma, leading to an active implementation of dynamic fleet selection, automated fare calculation, and location based booking logic. Integrated Git, GitHub, and CI/CD pipelines for automated deployment from VS Code directly to the live environment.

UI/UX Designer and Frontend Developer Intern | Synchrones (Pvt) Ltd | July 2025 – January 2026

- **UI/UX Design & Research** - By doing user research and producing wireframes, I helped with the design and user experience processes for a variety of software products.
- **Prototyping** - High-fidelity designs and interactive prototypes were created using Figma.

- **Front-end Development** - Acquired practical expertise in front-end development by converting designs into useful products using React and Vite.
- **Quality Assurance** - Throughout the internship, I upheld professional standards and discipline while making sure end users had a smooth and enjoyable experience.

ACADEMIC & PERSONAL PROJECTS

Developed an Employee Payroll System using Visual Studio .NET

- The system can Add employees details, Delete employees as well as the can update employee details. The system can calculate Net salary (Input basic salary, OT Hours, Amount of per hour) System print paysheet after we can see number of employee work days, number of employee absent days, number of employee work hourse, amount of per ot hour, EPF and ETF.

Developed a Photography Web Platform using Adobe Dreamweaver

- Using the site customers can see, What work has the photography done and what he can do. The most important thing is to take care of the photography information, booking dates, unbooking days, and when the booking is made using this site, it will go to the photography by mail.

Developed Super Market system using Python programming language

- Using this system we can input data and analysis weekly sales diagram using this diagram we can see what are the we need to improve things or what are the high demand products.

Developed bus reservation system using java.

- Using this system, customers can register for bus reservations. Queue data structure and link list data structure using the bus reservation system. So, the system can truly register the bus as well as register the customer and reserve a bus seat for the customer (bus seat reservation like a queue data structure).

Developed Centralized Sales & Distribution Management System (ISDN)

- Worked as a three-person team to create a Full Stack Sales Distribution System (WAMP) utilizing PHP and SQL, replacing manual logistics with a centralized digital platform. In particular, I designed the automated invoicing and role-based access control systems, which allowed for real-time inventory synchronization among five regional centers and gave management access to useful sales data.

Developed Green Life Store Management System (C# & .NET)

- Created a multi-layered desktop application with SQL Server and C# to optimize retail processes, such as order management and inventory tracking. For effective data retrieval, I created a solid database schema and used SQL LIKE queries to achieve optimum search capability. The project showcases end to end development skills with automated low-stock alerts and a secure role-based access system for administrators and customers.

EDUCATION

BEng (Hons) in Software Engineering (Reading)

September 2025 – Present

London Metropolitan University (UK) – via ESOF Metro Campus

- **Specialization** - Advanced Software Engineering and Architecture.
- **Focus Areas** - Advanced Programming, Software Development Lifecycle (SDLC), and Enterprise Application Development.

Pearson BTEC HND in Computing (Software Engineering)

September 2023 - March 2025

Pearson UK - via ESOF Metro Campus

- **Specialization** - Software Engineering
- **Key Modules** - Data Structures & Algorithms, Object-Oriented Programming (Java), and Database Management Systems

Certificate IN English

November 2022 - January 2023

British Way English Academy Kandy

- Thesis on “Writing, Listning, Reading and Speaking”.

SKILLS

- | | |
|-----------------|----------------------------|
| • Python | • Time Management |
| • Web Design | • Database (MySQL , MSSQL) |
| • CSS | • User Interface Design |
| • HTML5 | • User Experience Design |
| • Java | • Data Structure |
| • Visual Studio | • Software Tester |
| • React + Vite | • Flutter |
